RECORDS PACKAGE — INDEX

Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978
Matter: Ramirez-Holt v. Marchetti's Market, Inc. (premises liability — fall 01/20/2026)
Produced to counsel in response to HIPAA-compliant authorizations and one subpoena. Bates range RH-000001 – RH-001000.

Contents (as received, in order of production):

1. Lakeview Primary Care — 2021–2026, portal log
2. Millbrook General Hospital — ED 01/20/2026; inpatient 04/09–04/10/2026; education; audit trail; C-CDA summary
3. Pinecrest Orthopedics & Sports Medicine — 01/28/2026 through 09/09/2026
4. Clearwater Imaging — 02/12/2026; DICOM index
5. Riverbend Physical Therapy — 2019 (left knee) and 2026 (right shoulder); fax re-send; ledgers
6. Millbrook Surgical Center — 2019
7. Pruett Orthopedic Evaluations — IME 07/15/2026
8. Millbrook Pharmacy — dispensing history
9. Millbrook General Hospital — second production (subpoena)
10. Billing statements and explanations of benefits
11. Incident report; employer statement; correspondence; patient diary

NOTE: This is a SYNTHETIC record built for evaluation. Note bodies are adapted from a public, de-identified transcription corpus (MTSamples). Every name, facility, address, identifier and event is fictional.

Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: LPC-118204
Date of Service: 03/15/2021

OFFICE VISIT — ACUTE

Diagnoses: Right shoulder strain, mild
ICD-10: S46.011A
Chief concern: Right shoulder soreness x 5 days after overhead press at the gym. No trauma, no fall. Pain 3/10 with overhead reach only.

EXAMINATION

Right shoulder: mild tenderness over the anterior acromion; full active and passive ROM; strength 5/5 in abduction and external rotation; negative drop-arm; negative Hawkins. Left shoulder normal.

ASSESSMENT / PLAN

Mild overuse strain. Rest from overhead lifting x 2 weeks; ibuprofen PRN. No imaging. Return if not resolved.

Addendum 04/05/2021: telephone follow-up — patient reports complete resolution, back to full gym activity.

Electronically signed: Devorah S. Feinberg, MD

ANNUAL HEALTH MAINTENANCE EXAMINATION

Diagnoses: Encounter for general adult medical examination without abnormal findings
ICD-10: Z00.00
Chief concern: Annual examination. Feels well. Exercises 4x/week.

FAMILY HISTORY

Father died of an MI at age 67 with COPD and was a heavy smoker. Her mother is 88, living and well, status post lung cancer resection. Two brothers, living and well. One sister died at age 20 months of pneumonia.

SOCIAL HISTORY

The patient is married. Wife is living and well. She jogs or does Cross Country track 5 times a week, and weight training twice weekly. No smoking or significant alcohol intake. She is a physician in allergy/immunology.

PHYSICAL EXAMINATION

GENERAL

She appears alert, oriented, and in no acute distress with excellent cognitive function. VITAL SIGNS: Her height is 6 feet 2 inches, weight is 181.2, blood pressure is 126/80 in the right arm, 122/78 in the left arm, pulse rate is 68 and regular, and respirations are 16. SKIN: Warm and dry. There is no pallor, cyanosis or icterus. HEENT: Tympanic membranes benign. The pharynx is benign. Nasal mucosa is intact. Pupils are round, regular, and equal, reacting equally to light and accommodation. EOM intact. Fundi reveal flat discs with clear margins. Normal vasculature. No hemorrhages, exudates or microaneurysms. No thyroid enlargement. There is no lymphadenopathy. LUNGS: Clear to percussion and auscultation. Normal sinus rhythm. No premature beat, murmur, S3 or S4. Heart sounds are of good quality and intensity. The carotids, femorals, dorsalis pedis, and posterior tibial pulsations are brisk, equal, and active bilaterally. ABDOMEN: Benign without guarding, rigidity, tenderness, mass or organomegaly. NEUROLOGIC: Grossly intact. EXTREMITIES: Normal. GU: Genitalia normal. There are no inguinal hernias. There are mild hemorrhoids in the anal canal. The prostate is small, if any normal to mildly enlarged with discrete margins, symmetrical without significant palpable abnormality. There is no rectal mass. The stool is Hemoccult negative.

MUSCULOSKELETAL

Full active range of motion of both shoulders and both knees without pain. No joint effusion. Gait normal. Denies neck, shoulder, back or knee pain today.

ASSESSMENT / PLAN

Healthy 47-year-old woman. Routine labs ordered (see attached). Return in one year.
Electronically signed: Devorah S. Feinberg, MD

OFFICE VISIT — POST-EMERGENCY FOLLOW-UP

Diagnoses: Right shoulder rotator cuff strain/tear, suspected; Right knee contusion; Post-concussive headache, resolving

ICD-10: S46.011A, S80.01XA, F07.81

HPI: Seen in the ED 01/20/2026 after slipping on a wet floor at a grocery store. Still unable to lift the right arm above shoulder height; pain 6/10; sleeping poorly. Knee pain improving, 3/10. Headache resolved by day 2; no cognitive complaints.

Exam: Right shoulder — positive drop-arm, empty-can weakness 3/5, painful arc; passive ROM full. Right knee — resolving ecchymosis, trace effusion, full ROM. Neuro normal.

Assessment / Plan: Likely full-thickness rotator cuff tear. Urgent orthopedic referral placed today to Hollis A. Brankovic, MD (Pinecrest). Continue sling for comfort, ibuprofen; start physical therapy referral for the shoulder pending ortho. Work note: no lifting with the right arm; may work desk duties.

EMERGENCY DEPARTMENT TRIAGE RECORD

Arrival 19:21 Triage 19:29 Acuity: ESI 3 Triage RN: A. Lindgren, RN

Chief complaint: Slipped on a wet floor at a grocery store at approximately 6:42 PM today, landed on the outstretched right arm and right knee, struck the back of the head on a shelf edge. No loss of consciousness. Right shoulder pain 8/10, cannot lift the arm. Right knee pain 5/10. Mild headache. Ambulated in with assistance.

Vitals: BP 138/86 HR 92 RR 18 T 98.4 F SpO2 98% RA Pain 8/10 (right shoulder)

Allergies: NKDA Meds: none LMP: n/a (hysterectomy 2016)

Fall risk screening: positive (acute injury). Tetanus: up to date (2022).

MILLBROOK GENERAL HOSPITAL
1 Hospital Way, Millbrook, ST 61022
Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: MGH-7720913
Date of Service: 01/20/2026

EMERGENCY DEPARTMENT PROVIDER NOTE

Diagnoses: Right shoulder injury, suspected rotator cuff tear; Right knee contusion; Minor head injury without loss of consciousness

ICD-10: S46.011A, S80.01XA, S09.90XA, W01.0XXA, Y92.512

HISTORY OF PRESENT ILLNESS

47-year-old right-hand-dominant woman who slipped on a wet floor near the produce section of a grocery store at about 6:42 PM this evening. She fell forward onto her outstretched right hand and right knee and struck the occiput on a low shelf edge. No loss of consciousness, no amnesia, no vomiting. Immediate severe right shoulder pain with inability to actively abduct; right anterior knee pain; mild occipital headache. Denies neck pain, numbness, or weakness of the hand. No anticoagulants. Prior right shoulder issue: none reported today (see PCP records). Prior left knee arthroscopy 2019.

REVIEW OF SYSTEMS

Constitutional: no fever. Neuro: mild occipital headache, no vision change, no vomiting. Cardiopulmonary: negative. GI/GU: negative. Musculoskeletal: as per HPI. Skin: abrasion right knee.

PHYSICAL EXAMINATION

General: alert, uncomfortable, holding the right arm against the body. Vitals per triage. HEENT: occipital scalp contusion; pupils equal and reactive; no hemotympanum; no midline cervical tenderness. Chest/abdomen: nontender. Extremities: see focused examination.

MUSCULOSKELETAL (FOCUSED)

Right shoulder: diffuse tenderness over the greater tuberosity and anterior acromion; active abduction limited to 40 degrees by pain; passive ROM near full; positive drop-arm sign; weakness of external rotation 3/5; distal neurovascular intact. No deformity of the AC joint or clavicle. Right knee: abrasion and ecchymosis over the patella, mild effusion, full extension, flexion to 110 degrees, ligaments stable, no joint-line tenderness. Head: 2 cm occipital scalp contusion without laceration. Neck: nontender midline, full ROM. GCS 15.

ED COURSE

Radiographs of the right shoulder and right knee and a noncontrast CT of the head were obtained (reports attached). No fracture or dislocation; CT head negative. Ketorolac 30 mg IM at 20:14 with improvement to 5/10. Sling applied. Discussed likely rotator cuff injury given drop-arm and weakness; MRI to be arranged by orthopedics.

MEDICAL DECISION MAKING / DISPOSITION

Discharged home in stable condition at 23:48 with sling, ice, ibuprofen 600 mg q8h PRN and cyclobenzaprine 5 mg qHS PRN. Concussion precautions given; head-injury return precautions reviewed. Follow up with primary care in 3 days and orthopedics within 2 weeks. Work note: no use of the right arm x 1 week.

Electronically signed: Marcus T. Okonkwo-Bell, MD 01/20/2026 23:52

Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: MGH-7720913
Date of Service: 01/20/2026

RADIOLOGY REPORT — RIGHT SHOULDER, 3 VIEWS

Diagnoses: No acute osseous abnormality of the right shoulder

CLINICAL: Fall onto outstretched hand; shoulder pain.

FINDINGS: AP, scapular Y and axillary views. No fracture or dislocation. Glenohumeral and acromioclavicular alignment maintained. Mild subacromial spurring. Soft tissues unremarkable.

IMPRESSION: No acute fracture or dislocation. Mild degenerative spurring of the acromion. If clinical concern for rotator cuff injury persists, MRI is recommended.

RADIOLOGY REPORT — RIGHT KNEE, 3 VIEWS

Diagnoses: No acute osseous abnormality of the right knee

CLINICAL: Fall; anterior knee pain.

FINDINGS: No fracture or dislocation. Small joint effusion. Joint spaces preserved. No lipohemarthrosis.

IMPRESSION: No fracture. Small effusion, likely traumatic.

Electronically signed: Priya N. Sundaram, MD

RADIOLOGY REPORT — CT HEAD WITHOUT CONTRAST

Diagnoses: No acute intracranial abnormality

REASON FOR EXAM: Fall with occipital head strike.

TECHNIQUE

Noncontrast axial CT images of the head were obtained.

FINDINGS

There is no acute intracranial hemorrhage, mass effect, midline shift, or extra-axial fluid collection. The ventricles and cortical sulci are normal in shape and configuration. The gray/white matter junctions are well preserved. There is no calvarial fracture. The visualized paranasal sinuses and mastoid air cells are clear.

IMPRESSION

Negative for acute intracranial disease.CT CERVICAL SPINE

DISCHARGE INSTRUCTIONS

Diagnosis: Right shoulder injury (possible rotator cuff tear); right knee contusion; minor head injury.
Wear the sling except for hygiene. Ice 20 minutes every 2–3 hours for 48 hours. Ibuprofen 600 mg every 8 hours with food as needed; cyclobenzaprine 5 mg at bedtime as needed (may cause drowsiness).
Head injury: someone should stay with you tonight. Return immediately for worsening headache, repeated vomiting, confusion, weakness, or unequal pupils.
Follow up: Lakeview Primary Care within 3 days; Pinecrest Orthopedics within 2 weeks (referral placed).
Work: no use of the right arm for 1 week.
Patient signature on file 23:44. Copy given.

EMERGENCY DEPARTMENT PROVIDER NOTE

Diagnoses: Chest pain, unspecified; Hypertension
ICD-10: R07.9, I10

HISTORY OF PRESENT ILLNESS: 64-year-old woman with hypertension presenting with two hours of substernal chest pressure at rest, resolved on arrival. No exertional component. No prior cardiac history. Denies shortness of breath.

EXAMINATION: BP 168/94, HR 88, afebrile. Chest clear, heart regular without murmur, no chest wall tenderness. ECG: sinus rhythm, no ST changes. Troponin x2 negative.

ED COURSE / DISPOSITION: Aspirin 325 mg. Observed 6 hours; repeat troponin negative. Discharged with cardiology follow-up and outpatient stress test. Blood pressure regimen adjusted.

Electronically signed: Marcus T. Okonkwo-Bell, MD

HISTORY AND PHYSICAL — PREOPERATIVE

Diagnoses: Full-thickness supraspinatus tear, right shoulder, traumatic; Shoulder impingement syndrome, right

ICD-10: S46.011A, M75.41 Planned procedure: Right shoulder arthroscopic rotator cuff repair with subacromial decompression. Surgeon: Hollis A. Brankovic, MD Admission type: Inpatient (planned 23-hour observation converted to inpatient for pain control)

HPI: 47-year-old woman injured 01/20/2026 in a slip and fall on a wet floor; MRI-confirmed full-thickness supraspinatus tear; failed 12 visits of physical therapy; persistent night pain and weakness. Risks, benefits and alternatives reviewed; consent signed.

ALLERGIES

No known medical allergies.

FAMILY HISTORY

Patient admits a family history of arthritis associated with mother.

SOCIAL HISTORY

Patient denies smoking, alcohol abuse, illicit drug use and STDs.

REVIEW OF SYSTEMS

Musculoskeletal: (+) joint or musculoskeletal symptoms (+) stiffness in AM.Psychiatric: (-) psychiatric or emotional difficulties. Eyes: (-) visual disturbance or change. Neurological: (-) neurological symptoms or problems Endocrine: (-) endocrine-related symptoms. Allergic / Immunologic: (-) allergic or immunologic symptoms. Ears, Nose, Mouth, Throat: (-) symptoms involving ear, nose, mouth, or throat. Gastrointestinal: (-) GI symptoms. Genitourinary: (-) GU symptoms. Constitutional Symptoms: (-) constitutional symptoms such as fever, headache, nausea, dizziness. Cardiovascular: (-) cardiovascular problems or chest symptoms. Respiratory: (-)breathing difficulties, respiratory symptoms. Physical Exam: BP Standing: 116/68 Resp: 16 HR: 68 Temp: 98.1 Height: 5 ft. 11 in. Weight: 165 lbs. Patient is a 47-year-old female who appears pleasant, in no apparent distress, her given age, well developed, well nourished and with good attention to hygiene and body habitus. Oriented to person, place and time. Right shoulder shows evidence of swelling and tenderness. Radial pulses are 2 /4, bilateral. Brachial pulses are 2 /4, bilateral. Appearance: Normal. Tenderness: Anterior - moderate, Biceps - none, Posterior - moderate and Subacromial - moderate right. Range of Motion: Right shoulder ROM shows decreased flexion, decreased extension, decreased adduction, decreased abduction, decreased internal rotation, decreased external rotation. L shoulder normal. Strength: External rotation - fair. Internal rotation - poor right.AC Joint: Pain with ABD and cross-chest - mild right. Rotator Cuff: Impingement - moderate. Painful arc - moderate right. Instability: None.

PAST SURGICAL HISTORY (verified): Left knee arthroscopy 2019; hysterectomy 2016. No prior shoulder surgery.

MEDICATIONS: ibuprofen PRN; cyclobenzaprine PRN. ALLERGIES: NKDA.

EXAM: Vitals stable. Airway Mallampati II. Heart/lungs normal. Right shoulder as documented in clinic: positive drop-arm, abduction 3/5. Site marked "YES" by patient and surgeon.

ASSESSMENT / PLAN: Healthy 47-year-old, ASA II. Proceed with surgery under general anesthesia with interscalene block. Cefazolin 2 g pre-incision. Post-op sling, cryotherapy, multimodal analgesia.

OPERATIVE REPORT

PREOPERATIVE DIAGNOSIS: Full-thickness tear of the supraspinatus tendon, right shoulder; shoulder impingement syndrome.

POSTOPERATIVE DIAGNOSIS: Same; full-thickness supraspinatus tear 1.2 cm x 1.5 cm, retracted to the mid-humeral head; type II acromion with anterior spur.

PROCEDURE: Right shoulder arthroscopy; arthroscopic rotator cuff repair (double-row, two 5.5 mm anchors medial, two 4.75 mm knotless anchors lateral); subacromial decompression with acromioplasty; bursectomy.

SURGEON: Hollis A. Brankovic, MD ANESTHESIA: General endotracheal with right interscalene block (Yusuf R. Haddad, MD) EBL: 30 mL COMPLICATIONS: None IMPLANTS: four suture anchors (lot numbers on implant log).

INDICATIONS: 47-year-old woman with a traumatic full-thickness supraspinatus tear after a fall on the outstretched hand on 01/20/2026, confirmed by MRI 02/12/2026, with persistent pain and weakness despite 12 sessions of physical therapy.

ACROMION

1. There was a medium-sized (5 - 10 mm) anterior acromial spur. 2. The subacromial bursa was inflamed. 3. The subacromial bursa was thickened. 4. There was thickening of the coracoacromial ligament.

LIGAMENTS / CAPSULE

Joint capsule within normal limits.

LABRUM

The labrum is within normal limits.

ROTATOR CUFF

Full thickness tear of the supraspinatus tendon, 5 mm anterior to posterior, by 10 mm medial to lateral. Muscles and Tendons: The biceps tendon is within normal limits.

JOINT

Normal appearance of the glenoid and humeral surfaces.

DESCRIPTION OF PROCEDURE

PATIENT POSITIONING

Following induction of anesthesia, the patient was placed in the beach-chair position on the standard operating table. All body parts were well padded and protected to make sure there were no pressure points. Subsequently, the surgical area was prepped and draped in the appropriate sterile fashion with Betadine.

INSTRUMENTS AND METHODS

1. The arthroscope and instruments were introduced into the shoulder joint through the arthroscopic portals. 2. The subacromial space and bursa, biceps tendon, coracoacromial and glenohumeral ligaments, biceps tendon, rotator cuff, supraspinatus, subscapularis, infraspinatus, teres minor, capsulo-labral complex, capsule, glenoid labrum, humeral head, and glenoid, including the inner and outer surfaces of the rotator cuff, were visualized and probed. 3. The subacromial bursa, subacromial soft tissues and frayed rotator cuff tissue were resected and debrided using a motorized resector and 4.5

Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: MGH-7720913
Date of Service: 04/09/2026
(continued)

Synovial Resector. 4. The anterior portion of the acromion and acromial spur were resected with the 5.5 acromionizer burr. Approximately 5 mm of bone was removed. The coracoacromial ligament was released with the bony resection. The shoulder joint was thoroughly irrigated. 5. The edges of the cuff tissue were prepared, prior to the fixation, using the motorized resector. 6. The supraspinatus tendon was reattached and sutured using the arthroscopic knot pusher and Mitek knotless anchor system and curved pointed suture passer and large bore cannula (to pass the sutures). The repair was accomplished in a side-to-side and a tendon-to-bone fashion using three double loaded Mitek G IV suture anchors with 1 PDS suture. 7. The repair was stable to palpation with the probe and watertight. 8. The arthroscope and instruments were removed from the shoulder.

WOUND CLOSURE

The joint was thoroughly irrigated with 7 L of sterile saline. The portal sites were infiltrated with 1% Xylocaine. The skin was closed with 4-0 Vicryl using interrupted subcuticular technique.

DRAINS / DRESSING

Applied sterile dressing including gauze, iodoform gauze and Elastoplast.

DISPOSITION

Sling and abduction pillow applied. To PACU in stable condition. Admit for overnight observation and pain control; interscalene block in place.

Date of Service: 04/09/2026

NURSING SHIFT ASSESSMENT — 04/09/2026 12:00
Neuro: alert, oriented x4; interscalene block dense — RUE sensation absent. Respiratory: lungs clear, RA, SpO2 98%. Cardiac: regular, no edema. GI: tolerating diet. GU: voiding. Skin: portals dry, abduction pillow and sling in place. Pain: 4/10 managed with scheduled acetaminophen and PRN oxycodone. Safety: bed low, call light in reach. Activity: PACU → floor.
Plan: continue cryotherapy, block precautions, PT/OT sling education, anticipate discharge 04/10/2026 AM.
R. Castellano, RN

MILLBROOK GENERAL HOSPITAL

1 Hospital Way, Millbrook, ST 61022 · [Phone]

Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: MGH-7720913
Date of Service: 04/10/2026

DISCHARGE SUMMARY

Admitted: 04/09/2026 Discharged: 04/10/2026 10:30 Length of stay: 1 day Attending: Hollis A. Brankovic, MD

Diagnoses: Full-thickness supraspinatus tear, right shoulder, status post arthroscopic repair and subacromial decompression 04/09/2026

Procedures: Right shoulder arthroscopic rotator cuff repair, double-row; subacromial decompression; bursectomy (04/09/2026).

Hospital course: Uncomplicated. Interscalene block provided dense analgesia through the evening; as it resolved overnight pain rose to 7/10 and was controlled with scheduled acetaminophen, ketorolac and oral oxycodone. Ambulating independently by POD1 morning. Portals dry. POD1 labs unremarkable (WBC 10.9, expected post-operative). Tolerating diet, voiding.

Discharge medications: acetaminophen 1000 mg q6h; oxycodone 5 mg q6h PRN #20; docusate; ondansetron PRN. Ibuprofen and cyclobenzaprine discontinued.

Instructions: Sling with abduction pillow at all times except pendulums and hygiene for 6 weeks. No active lifting of the right arm. Cryotherapy. Pendulum exercises 3x daily. Return precautions reviewed. Physical therapy to begin 04/27/2026 per protocol. Follow up in clinic 04/22/2026 for suture removal.

Work status: off work until cleared at the 2-week visit; then sedentary duty only, no use of the right arm.

Electronically signed: Hollis A. Brankovic, MD 04/10/2026 10:12

Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: MGH-7720913
Generated: 09/12/2026

CONTINUITY OF CARE DOCUMENT (C-CDA) — SUMMARY OF CARE, GENERATED 09/12/2026
Encounter: 03/15/2021 — Lakeview Primary Care — office_visit — Devorah S. Feinberg, MD
Pre-injury (2021) right shoulder overuse strain after gym overhead press; resolved by 04/05/2021 per addendum.
Encounter: 05/10/2022 — Lakeview Primary Care — office_visit — Devorah S. Feinberg, MD
Pre-injury annual exam 05/10/2022; denies shoulder or knee pain; full ROM.
Encounter: 05/16/2023 — Lakeview Primary Care — office_visit — Devorah S. Feinberg, MD
Pre-injury annual exam 05/16/2023; denies shoulder or knee pain; full ROM.
Encounter: 05/21/2024 — Lakeview Primary Care — office_visit — Devorah S. Feinberg, MD
Pre-injury annual exam 05/21/2024; denies shoulder or knee pain; full ROM.
Encounter: 06/03/2025 — Lakeview Primary Care — office_visit — Devorah S. Feinberg, MD
Pre-injury annual exam 06/03/2025; denies shoulder or knee pain; full ROM.
Encounter: 01/23/2026 — Lakeview Primary Care — office_visit — Devorah S. Feinberg, MD
PCP follow-up 01/23/2026: drop-arm positive; urgent ortho referral; work restriction.
Encounter: NA — Lakeview Primary Care — telephone_encounter — T. Nakamura, MA
Undated telephone encounter: cyclobenzaprine refill; ortho referral re-faxed. No date printed anywhere on the page.
Encounter: 01/20/2026 — Millbrook General Hospital — emergency_department — A. Lindgren, RN
ED triage 01/20/2026 (part of the ED encounter).
Encounter: 01/20/2026 — Millbrook General Hospital — emergency_department — Marcus T. Okonkwo-Bell, MD
ED provider note 01/20/2026: slip-and-fall on wet floor; right shoulder (drop-arm positive), right knee contusion, minor head injury; XR/CT negative; sling; ortho referral.
Encounter: 01/20/2026 — Millbrook General Hospital — emergency_department — S. Bhattacharya, RN
ED nursing notes.
Encounter: 01/20/2026 — Millbrook General Hospital — imaging — Priya N. Sundaram, MD
XR right shoulder 01/20/2026: no fracture; mild acromial spurring; MRI recommended if RC concern.
Encounter: 01/20/2026 — Millbrook General Hospital — imaging — Priya N. Sundaram, MD
XR right knee 01/20/2026: no fracture; small effusion.
Encounter: 01/20/2026 — Millbrook General Hospital — imaging — Priya N. Sundaram, MD
CT head 01/20/2026: negative for acute intracranial process.
Encounter: 01/20/2026 — Millbrook General Hospital — medication_administration — S. Bhattacharya, RN
ED MAR (part of the ED encounter).
Encounter: 01/20/2026 — Millbrook General Hospital — nursing — S. Bhattacharya, RN
ED vital-sign table (part of the ED encounter).
Encounter: 01/20/2026 — Millbrook General Hospital — nursing — S. Bhattacharya, RN
ED neuro checks (part of the ED encounter).
Encounter: 01/20/2026 — Millbrook General Hospital — lab — Marcus T. Okonkwo-Bell, MD
ED labs (collected 19:58; part of the ED encounter).
Encounter: 01/20/2026 — Millbrook General Hospital — emergency_department — S. Bhattacharya, RN
ED discharge instructions.
Encounter: 01/20/2026 — Millbrook General Hospital — emergency_department — Marcus T. Okonkwo-Bell, MD
THE ED ENCOUNTER 01/20/2026 as one distinct encounter (triage, provider note, nursing, imaging, labs, MAR, flowsheets, orders, discharge). Sub-documents listed separately with part_of.
Encounter: 04/09/2026 — Millbrook General Hospital — hospital_admission — Hollis A. Brankovic, MD
Pre-op H&P 04/09/2026.

Encounter: 04/09/2026 — Millbrook General Hospital — anesthesia — Yusuf R. Haddad, MD
Anesthesia record 04/09/2026 07:45–09:50 (GA + interscalene block).
Encounter: 04/09/2026 — Millbrook General Hospital — surgery — Hollis A. Brankovic, MD
Operative report 04/09/2026: arthroscopic RC repair (double-row) + subacromial decompression, right shoulder.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Vital Signs) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Pain Assessment) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Neurovascular Checks — Right Upper Extremity) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Intake And Output) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Lines / Drains / Airway) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Activity / Safety) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Patient Education) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Skin / Wound) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — medication_administration — J. Mkhize, RN
Inpatient MAR 04/09–04/10/2026.
Encounter: 04/10/2026 — Millbrook General Hospital — lab — Hollis A. Brankovic, MD
POD1 labs (collected 04/10 05:40).
Encounter: 04/10/2026 — Millbrook General Hospital — hospital_discharge — Hollis A. Brankovic, MD
Discharge summary 04/10/2026: uncomplicated overnight stay after RC repair.

PROBLEM LIST
Right shoulder full-thickness rotator cuff tear (S46.011A) — active, onset 01/20/2026
Right knee contusion (S80.01XA) — resolved
Minor head injury without LOC (S09.90XA) — resolved
Left knee medial meniscus tear (M23.222) — resolved 2019, s/p arthroscopy
Right shoulder strain (S46.011A) — resolved 2021

MEDICATIONS
acetaminophen; oxycodone (completed); ibuprofen PRN; cyclobenzaprine (completed)
ALLERGIES
NKDA

RESULTS

ED labs (collected 19:58; part of the ED encounter).
Encounter: 01/20/2026 — Millbrook General Hospital — emergency_department — S. Bhattacharya, RN
ED discharge instructions.
Encounter: 01/20/2026 — Millbrook General Hospital — emergency_department — Marcus T. Okonkwo-Bell, MD
THE ED ENCOUNTER 01/20/2026 as one distinct encounter (triage, provider note, nursing, imaging, labs, MAR, flowsheets, orders, discharge). Sub-documents listed separately with part_of.
Encounter: 04/09/2026 — Millbrook General Hospital — hospital_admission — Hollis A. Brankovic, MD
Pre-op H&P 04/09/2026.
Encounter: 04/09/2026 — Millbrook General Hospital — anesthesia — Yusuf R. Haddad, MD
Anesthesia record 04/09/2026 07:45–09:50 (GA + interscalene block).
Encounter: 04/09/2026 — Millbrook General Hospital — surgery — Hollis A. Brankovic, MD
Operative report 04/09/2026: arthroscopic RC repair (double-row) + subacromial decompression, right shoulder.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Vital Signs) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Pain Assessment) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Neurovascular Checks — Right Upper Extremity) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Intake And Output) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Lines / Drains / Airway) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Activity / Safety) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Patient Education) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Skin / Wound) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — medication_administration — J. Mkhize, RN
Inpatient MAR 04/09–04/10/2026.
Encounter: 04/10/2026 — Millbrook General Hospital — lab — Hollis A. Brankovic, MD

POD1 labs (collected 04/10 05:40).
Encounter: 04/10/2026 — Millbrook General Hospital — hospital_discharge — Hollis A. Brankovic, MD
Discharge summary 04/10/2026: uncomplicated overnight stay after RC repair.

PROBLEM LIST
Right shoulder full-thickness rotator cuff tear (S46.011A) — active, onset 01/20/2026
Right knee contusion (S80.01XA) — resolved
Minor head injury without LOC (S09.90XA) — resolved
Left knee medial meniscus tear (M23.222) — resolved 2019, s/p arthroscopy
Right shoulder strain (S46.011A) — resolved 2021

MEDICATIONS
acetaminophen; oxycodone (completed); ibuprofen PRN; cyclobenzaprine (completed)
ALLERGIES
NKDA

RESULTS

Encounter: 01/20/2026 — Millbrook General Hospital — emergency_department — Marcus T. Okonkwo-Bell, MD
THE ED ENCOUNTER 01/20/2026 as one distinct encounter (triage, provider note, nursing, imaging, labs, MAR, flowsheets, orders, discharge). Sub-documents listed separately with part_of.
Encounter: 04/09/2026 — Millbrook General Hospital — hospital_admission — Hollis A. Brankovic, MD
Pre-op H&P 04/09/2026.
Encounter: 04/09/2026 — Millbrook General Hospital — anesthesia — Yusuf R. Haddad, MD
Anesthesia record 04/09/2026 07:45–09:50 (GA + interscalene block).
Encounter: 04/09/2026 — Millbrook General Hospital — surgery — Hollis A. Brankovic, MD
Operative report 04/09/2026: arthroscopic RC repair (double-row) + subacromial decompression, right shoulder.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Vital Signs) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.

Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Pain Assessment) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Neurovascular Checks — Right Upper Extremity) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Intake And Output) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Lines / Drains / Airway) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Activity / Safety) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Patient Education) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — nursing — J. Mkhize, RN
Inpatient flowsheet export (Skin / Wound) 04/09 09:50 → 04/10 09:45; one nursing record, not per-row events.
Encounter: 04/09/2026 — Millbrook General Hospital — medication_administration — J. Mkhize, RN
Inpatient MAR 04/09–04/10/2026.
Encounter: 04/10/2026 — Millbrook General Hospital — lab — Hollis A. Brankovic, MD
POD1 labs (collected 04/10 05:40).
Encounter: 04/10/2026 — Millbrook General Hospital — hospital_discharge — Hollis A. Brankovic, MD
Discharge summary 04/10/2026: uncomplicated overnight stay after RC repair.

PROBLEM LIST
Right shoulder full-thickness rotator cuff tear (S46.011A) — active, onset 01/20/2026
Right knee contusion (S80.01XA) — resolved
Minor head injury without LOC (S09.90XA) — resolved
Left knee medial meniscus tear (M23.222) — resolved 2019, s/p arthroscopy
Right shoulder strain (S46.011A) — resolved 2021

MEDICATIONS
acetaminophen; oxycodone (completed); ibuprofen PRN; cyclobenzaprine (completed)
ALLERGIES
NKDA

RESULTS
XR right shoulder 01/20/2026: see source document

CONTINUITY OF CARE DOCUMENT (C-CDA) — SUMMARY OF CARE, GENERATED 09/12/2026

Encounter: 03/15/2021 — Lakeview Primary Care — office_visit — Devorah S. Feinberg, MD
Pre-injury (2021) right shoulder overuse strain after gym overhead press; resolved by 04/05/2021 per addendum.
Encounter: 05/10/2022 — Lakeview Primary Care — office_visit — Devorah S. Feinberg, MD
Pre-injury annual exam 05/10/2022; denies shoulder or knee pain; full ROM.
Encounter: 05/16/2023 — Lakeview Primary Care — office_visit — Devorah S. Feinberg, MD
Pre-injury annual exam 05/16/2023; denies shoulder or knee pain; full ROM.
Encounter: 05/21/2024 — Lakeview Primary Care — office_visit — Devorah S. Feinberg, MD
Pre-injury annual exam 05/21/2024; denies shoulder or knee pain; full ROM.
Encounter: 06/03/2025 — Lakeview Primary Care — office_visit — Devorah S. Feinberg, MD
Pre-injury annual exam 06/03/2025; denies shoulder or knee pain; full ROM.
Encounter: 01/23/2026 — Lakeview Primary Care — office_visit — Devorah S. Feinberg, MD
PCP follow-up 01/23/2026: drop-arm positive; urgent ortho referral; work restriction.
Encounter: NA — Lakeview Primary Care — telephone_encounter — T. Nakamura, MA
Undated telephone encounter: cyclobenzaprine refill; ortho referral re-faxed. No date printed anywhere on the page.
Encounter: 01/20/2026 — Millbrook General Hospital — emergency_department — A. Lindgren, RN
ED triage 01/20/2026 (part of the ED encounter).
Encounter: 01/20/2026 — Millbrook General Hospital — emergency_department — Marcus T. Okonkwo-Bell, MD
ED provider note 01/20/2026: slip-and-fall on wet floor; right shoulder (drop-arm positive), right knee contusion, minor head injury; XR/CT negative; sling; ortho referral.
Encounter: 01/20/2026 — Millbrook General Hospital — emergency_department — S. Bhattacharya, RN
ED nursing notes.
Encounter: 01/20/2026 — Millbrook General Hospital — imaging — Priya N. Sundaram, MD
XR right shoulder 01/20/2026: no fracture; mild acromial spurring; MRI recommended if RC concern.
Encounter: 01/20/2026 — Millbrook General Hospital — imaging — Priya N. Sundaram, MD
XR right knee 01/20/2026: no fracture; small effusion.
Encounter: 01/20/2026 — Millbrook General Hospital — imaging — Priya N. Sundaram, MD
CT head 01/20/2026: negative for acute intracranial process.
Encounter: 01/20/2026 — Millbrook General Hospital — medication_administration — S. Bhattacharya, RN
ED MAR (part of the ED encounter).

MILLBROOK GENERAL HOSPITAL

1 Hospital Way, Millbrook, ST 61022 · [Phone]

Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: MGH-7720913
Date of Service: 04/11/2026

POST-DISCHARGE TELEPHONE CALL — POD 2

Called patient 04/11/2026 10:20. Pain 4/10, controlled on scheduled acetaminophen and two doses of oxycodone overnight. Block fully resolved; sensation and finger motion normal. Dressing dry. No fever, no calf pain. Sleeping in recliner. Reviewed sling use and pendulums; reinforced call parameters. Patient has questions about showering — instructed per handout (48 hours, dressing covered). Follow-up 04/22/2026 confirmed.

R. Castellano, RN

SECTION 3 — PINECREST ORTHOPEDICS & SPORTS MEDICINE

CERTIFICATION

CERTIFICATION OF RECORDS CUSTODIAN

I, M. Sato, certify that I am the duly authorized custodian of records for PINECREST ORTHOPEDICS & SPORTS MEDICINE and that the attached records for patient Ramirez-Holt, Teodora L., DOB 09/02/1978, are true and complete copies of the records maintained in the ordinary course of business. Signed under penalty of perjury. _____ Date: 09/12/2026

M. Sato, Health Information Management

Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: PRO-55021
Date of Service: 01/28/2026

NEW PATIENT CONSULTATION — RIGHT SHOULDER AND RIGHT KNEE

Diagnoses: Right shoulder full-thickness rotator cuff tear, suspected; Right knee contusion, resolving
ICD-10: S46.011A, S80.01XA
Referring: Devorah S. Feinberg, MD Date of injury: 01/20/2026 Mechanism: slip and fall on a wet floor (grocery store), FOOSH plus direct blow to the right knee, occipital head strike.

HISTORY OF PRESENT ILLNESS

47-year-old right-hand-dominant administrative supervisor, eight days after the fall described above. Constant right shoulder pain 6/10, worse at night and with any overhead reach; cannot lift a coffee pot with the right arm. No prior shoulder surgery. She recalls a brief episode of right shoulder soreness after weight training in 2021 that resolved with rest (confirmed in PCP records). Right knee: anterior soreness only, improving. Headaches resolved. Prior surgery: left knee arthroscopy 2019, fully recovered.

ALLERGIES

No known medical allergies.

FAMILY HISTORY

Patient admits a family history of arthritis associated with mother.

SOCIAL HISTORY

Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: PRO-55021
Date of Service: 01/28/2026
(continued)

Patient denies smoking, alcohol abuse, illicit drug use and STDs.

REVIEW OF SYSTEMS

Musculoskeletal: (+) joint or musculoskeletal symptoms (+) stiffness in AM.Psychiatric: (-) psychiatric or emotional difficulties. Eyes: (-) visual disturbance or change. Neurological: (-) neurological symptoms or problems Endocrine: (-) endocrine-related symptoms. Allergic / Immunologic: (-) allergic or immunologic symptoms. Ears, Nose, Mouth, Throat: (-) symptoms involving ear, nose, mouth, or throat. Gastrointestinal: (-) GI symptoms. Genitourinary: (-) GU symptoms. Constitutional Symptoms: (-) constitutional symptoms such as fever, headache, nausea, dizziness. Cardiovascular: (-) cardiovascular problems or chest symptoms. Respiratory: (-)breathing difficulties, respiratory symptoms. Physical Exam: BP Standing: 116/68 Resp: 16 HR: 68 Temp: 98.1 Height: 5 ft. 11 in. Weight: 165 lbs. Patient is a 47-year-old female who appears pleasant, in no apparent distress, her given age, well developed, well nourished and with good attention to hygiene and body habitus. Oriented to person, place and time. Right shoulder shows evidence of swelling and tenderness. Radial pulses are 2 /4, bilateral. Brachial pulses are 2 /4, bilateral. Appearance: Normal. Tenderness: Anterior - moderate, Biceps - none, Posterior - moderate and Subacromial - moderate right. Range of Motion: Right shoulder ROM shows decreased flexion, decreased extension, decreased adduction, decreased abduction, decreased internal rotation, decreased

Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: PRO-55021
Date of Service: 01/28/2026
(continued)

external rotation. L shoulder normal. Strength: External rotation - fair. Internal rotation - poor right.AC Joint: Pain with ABD and cross-chest - mild right. Rotator Cuff: Impingement - moderate. Painful arc - moderate right. Instability: None.

EXAMINATION

Right shoulder: mild atrophy not yet evident; tenderness at the greater tuberosity; active forward flexion 90°, abduction 60° (passive 160°/150°); positive drop-arm; empty-can 3/5; external rotation 3+/5; positive Hawkins and Neer; lift-off normal; no instability. Left shoulder normal. Right knee: 0–130°, trace effusion, stable, mild patellar tenderness; McMurray negative. Neurovascular intact.

IMAGING REVIEWED

ED radiographs 01/20/2026: no fracture; mild acromial spurring.

ASSESSMENT / PLAN

Clinical picture consistent with an acute full-thickness supraspinatus tear after a fall on the outstretched hand; the 2021 episode was a self-limited strain without imaging and does not change this impression. MRI right shoulder without contrast ordered; MRI right knee to evaluate persistent effusion. Continue sling for comfort, begin gentle pendulum exercises. Start physical therapy (shoulder protocol, pre-operative range of motion). Work: no use of the right arm above waist level; no lifting > 5 lb. Return after MRI.

Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: PRO-55021
Date of Service: 01/28/2026
(continued)

Electronically signed: Hollis A. Brankovic, MD

Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: PRO-55021
Date of Service: 02/25/2026

FOLLOW-UP — MRI REVIEW

Diagnoses: Full-thickness supraspinatus tear, right shoulder, traumatic; Right knee patellar contusion
ICD-10: S46.011A, S80.01XA

Interval: Completed 6 PT visits; night pain persists; cannot work overhead. MRI right shoulder 02/12/2026 reviewed with the patient: full-thickness supraspinatus tear, 1.2 cm retraction, no atrophy. MRI right knee: contusion only.

FINDINGS

On examination, she has 4 plus over 5 strength in the right biceps and triceps muscle groups, 4 out of 5 right deltoid, 5 out of 5 otherwise in both muscle groups and all muscle groups of upper extremities. Light touch sensation is minimally decreased in the right C6 distribution; otherwise, intact. Biceps and brachioradialis reflexes are 1 plus. Hoffmann sign normal bilaterally. Motor strength is 5 out of 5 in all

Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: PRO-55021
Date of Service: 02/25/2026
(continued)

muscle groups in lower extremities. Hawkins and Neer impingement signs are positive at the right shoulder. An EMG study performed on 02/25/2026 demonstrates no evidence of radiculopathy or plexopathy or nerve entrapment to the right upper extremity. Cervical spine MRI dated 02/25/2026 is reviewed. It is relatively limited study due to artifact. She does demonstrate evidence of minimal-to-moderate stenosis at the C5-C6 level but without evidence of cord impingement or cord signal change. There appears to be right paracentral disc herniation at the C5-C6 level, although axial T2-weighted images are quite limited.

ASSESSMENT / PLAN

Traumatic full-thickness rotator cuff tear in a 47-year-old without fatty infiltration — a good surgical candidate; delay risks retraction and atrophy. Recommend arthroscopic rotator cuff repair with subacromial decompression. Patient elects to complete a further 4 weeks of physical therapy first (work

Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: PRO-55021
Date of Service: 02/25/2026
(continued)

obligations) and then proceed. Surgery to be scheduled for early April. Knee: no intervention; continue PT quad work. Restrictions continued.

Date of Service: 03/26/2026

PRE-OPERATIVE VISIT

Diagnoses: Full-thickness supraspinatus tear, right shoulder, traumatic
Interval: 12 PT visits completed; AROM improved but weakness and night pain persist. Wishes to proceed. Surgery scheduled 04/09/2026 at Millbrook General; consent reviewed; risks including re-tear, stiffness, infection and nerve injury discussed. Pre-op labs and anesthesia evaluation ordered. Stop NSAIDs 5 days before surgery.
Work: continue restrictions.
Electronically signed: Hollis A. Brankovic, MD

Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: PRO-55021
Date of Service: 08/12/2026

FOLLOW-UP — 18 WEEKS

Diagnoses: Status post right shoulder arthroscopic rotator cuff repair 04/09/2026

Some regression after the PT gap; stiffness at end range; AROM flexion 150°, ER 55°; strength 4/5. Resume PT. Naproxen refilled. Reviewed the defense IME report dated 07/15/2026: I disagree that this was a degenerative tear — the MRI showed no fatty atrophy and the mechanism was a fall on the outstretched hand in a patient with a documented normal shoulder exam seven months earlier. Work: no lifting > 15 lb, no overhead work. Return 4 weeks for final evaluation.

Electronically signed: Hollis A. Brankovic, MD

MAXIMUM MEDICAL IMPROVEMENT EVALUATION

Diagnoses: Status post right shoulder arthroscopic rotator cuff repair 04/09/2026, MMI

Maximum medical improvement reached today, 09/09/2026, approximately 5 months after surgery. AROM flexion 165°, abduction 160°, ER 65°; strength 4+/5; residual end-range stiffness and fatigue with sustained overhead work. Permanent restriction: no lifting greater than 20 lb overhead with the right arm; no repetitive overhead work above shoulder height. Future care: possible repeat MRI if symptoms recur; risk of re-tear discussed. Discharged from active care; home program.

Date of Service: 02/12/2026

MRI RIGHT SHOULDER WITHOUT CONTRAST

Diagnoses: Full-thickness tear of the supraspinatus tendon, right shoulder

CLINICAL: 47-year-old woman; fall on outstretched hand 01/20/2026; weakness and pain.

TECHNIQUE: Multiplanar, multisequence MRI of the right shoulder on a 1.5T magnet.

FINDINGS

Rotator cuff: There is a full-thickness, full-width tear of the supraspinatus tendon at its insertion on the greater tuberosity, with the torn tendon edge retracted approximately 1.2 cm medially to the level of the humeral head apex. Fluid extends from the glenohumeral joint through the defect into the subacromial-subdeltoid bursa. The supraspinatus muscle belly shows normal bulk and signal without fatty infiltration (Goutallier 0–1). Mild tendinosis of the infraspinatus without tear. The subscapularis and teres minor are intact. Long head of the biceps tendon is normally located within the groove without tear; the biceps anchor is intact.

Labrum: Intact without tear. Glenohumeral ligaments intact. No Hill-Sachs or Bankart lesion.

Bones: Mild reactive marrow edema at the greater tuberosity footprint. No fracture. Type II (curved) acromion with a small anterior spur. Mild acromioclavicular degenerative change with capsular hypertrophy.

Joint: Small glenohumeral effusion. No loose bodies. Articular cartilage preserved.

IMPRESSION

1. Full-thickness tear of the supraspinatus tendon with approximately 1.2 cm of retraction and fluid in the subacromial-subdeltoid bursa. No fatty atrophy of the supraspinatus muscle (Goutallier 0–1), favoring an acute or subacute tear.
2. Mild infraspinatus tendinosis without tear. Intact subscapularis.
3. Small joint effusion. Mild acromioclavicular degenerative change with a type II acromion.

MRI RIGHT KNEE WITHOUT CONTRAST

Diagnoses: Bone contusion, patella, right knee; No meniscal or ligamentous tear

CLINICAL: Fall onto the knee 01/20/2026; persistent effusion.

FINDINGS: Bone marrow edema in the inferior pole of the patella consistent with contusion. Small joint effusion. Menisci intact. ACL, PCL, collateral ligaments intact. Articular cartilage preserved. Extensor mechanism intact.

IMPRESSION: Patellar bone contusion with small effusion. No internal derangement.

OPERATIVE REPORT

PREOPERATIVE DIAGNOSIS: Left knee medial meniscus tear, posterior horn.

POSTOPERATIVE DIAGNOSIS: Left knee medial meniscus tear, posterior horn; grade II chondromalacia medial femoral condyle.

PROCEDURE: Left knee arthroscopy with partial medial meniscectomy and chondroplasty.

SURGEON: Wendell P. Osei, MD ANESTHESIA: General LMA EBL: minimal COMPLICATIONS: none.

INDICATIONS: 40-year-old woman with six months of LEFT knee medial joint line pain and mechanical catching after a hiking misstep in 02/2019; MRI 06/2019 showed a posterior horn medial meniscus tear. Failed conservative care.

DESCRIPTION OF PROCEDURE

The patient was brought to the operating room, identified, and the LEFT knee was marked and confirmed during time-out. After induction of general anesthesia a tourniquet was placed on the left thigh. Standard anterolateral and anteromedial portals were established. Diagnostic arthroscopy: patellofemoral joint with grade II chondromalacia of the medial femoral condyle; ACL and PCL intact; lateral compartment normal; medial compartment with a complex tear of the posterior horn of the medial meniscus. Using a basket punch and shaver, a partial medial meniscectomy was performed back to a stable rim. Chondroplasty of the loose flap on the medial femoral condyle. The joint was irrigated, portals closed with nylon, sterile dressing and a knee immobilizer applied. The patient tolerated the procedure well and was taken to recovery in stable condition.

DISPOSITION: Discharged home same day. Weight bearing as tolerated. PT referral.

RIVERBEND PHYSICAL THERAPY

15 Riverbend Court, Millbrook, ST 61022 · [Phone]

Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: RPT-30412
Date of Service: 02/02/2026

PHYSICAL THERAPY INITIAL EVALUATION — RIGHT SHOULDER

Diagnoses: Right shoulder full-thickness rotator cuff tear (pre-operative); Right knee contusion
Referring: Hollis A. Brankovic, MD Date of injury: 01/20/2026 Mechanism: slip and fall on a wet floor at a grocery store; fall on outstretched right hand.
History: 47-year-old right-hand-dominant woman, 13 days post fall. Pain 6/10 at rest, 9/10 with overhead reach; night pain. Unable to reach behind back or lift a gallon of milk. Prior: 2021 right shoulder strain (resolved); 2019 left knee arthroscopy (recovered; attended PT here in 2019).
Baseline measures: Right shoulder AROM flexion 85°, abduction 60°, ER 30°; PROM flexion 155°. Strength: abduction 3/5, ER 3/5. DASH 62. Right knee AROM 0–125°, quad 4/5.

STRENGTH

Strength is 3/5 for right shoulder, 4+/5 for left shoulder. The patient denies any pain upon light and deep palpation at the shoulder joints. There is no evidence of temperature change, increased swelling or any discoloration at the right shoulder joint. The patient does not appear to have instability at this time with formal tests at the right shoulder joint.

ASSESSMENT

The patient would benefit from skilled physical therapy intervention in order to address the following problem list:,1. Increased pain. 2. Decreased range of motion. 3. Decreased strength. 4. Decreased ability to perform functional activities and work tasks. 5. Decreased ambulation tolerance.

PROGNOSIS

Prognosis is good for above-stated goals, with compliance to a home exercise program and treatment.
Plan of care: 2x/week for 6 weeks (12 visits) pre-operative program — pain control, scapular stabilization, PROM/AAROM, knee quad strengthening — then re-evaluate for surgery timing.

HOME EXERCISE PROGRAM — SHEET 3 OF 4 (issued at visit 36)

PULLEY FLEXION

Starting position: stand or sit with good posture. Movement: perform slowly through a comfortable range: do not push into sharp pain. Hold 2 seconds; return. Repeat 20 times, 2 sets, once daily. Stop and contact your therapist if pain increases for more than 2 hours afterward.

RIVERBEND PHYSICAL THERAPY

15 Riverbend Court, Millbrook, ST 61022 · [Phone]

Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: RPT-30412
Date of Service: 02/02/2026

PHYSICAL THERAPY INITIAL EVALUATION — RIGHT SHOULDER

Diagnoses: Right shoulder full-thickness rotator cuff tear (pre-operative); Right knee contusion
Referring: Hollis A. Brankovic, MD Date of injury: 01/20/2026 Mechanism: slip and fall on a wet floor at a grocery store; fall on outstretched right hand.
History: 47-year-old right-hand-dominant woman, 13 days post fall. Pain 6/10 at rest, 9/10 with overhead reach; night pain. Unable to reach behind back or lift a gallon of milk. Prior: 2021 right shoulder strain (resolved); 2019 left knee arthroscopy (recovered; attended PT here in 2019).
Baseline measures: Right shoulder AROM flexion 85°, abduction 60°, ER 30°; PROM flexion 155°. Strength: abduction 3/5, ER 3/5. DASH 62. Right knee AROM 0–125°, quad 4/5.

STRENGTH

Strength is 3/5 for right shoulder, 4+/5 for left shoulder. The patient denies any pain upon light and deep palpation at the shoulder joints. There is no evidence of temperature change, increased swelling or any discoloration at the right shoulder joint. The patient does not appear to have instability at this time with formal tests at the right shoulder joint.

ASSESSMENT

The patient would benefit from skilled physical therapy intervention in order to address the following problem list:,1. Increased pain. 2. Decreased range of motion. 3. Decreased strength. 4. Decreased ability to perform functional activities and work tasks. 5. Decreased ambulation tolerance.

PROGNOSIS

Prognosis is good for above-stated goals, with compliance to a home exercise program and treatment.
Plan of care: 2x/week for 6 weeks (12 visits) pre-operative program — pain control, scapular stabilization, PROM/AAROM, knee quad strengthening — then re-evaluate for surgery timing.
Electronically signed: Marisol E. Quintero, PT, DPT

CERTIFICATION

CERTIFICATION OF RECORDS CUSTODIAN

I, D. Ferreira, certify that I am the duly authorized custodian of records for MILLBROOK SURGICAL CENTER and that the attached records for patient Ramirez-Holt, Teodora L., DOB 09/02/1978, are true and complete copies of the records maintained in the ordinary course of business.

Signed under penalty of perjury. _____ Date: 09/12/2026

D. Ferreira, Health Information Management

SECTION 7 — INDEPENDENT MEDICAL EXAMINATION (DEFENSE)

PRUETT ORTHOPEDIC EVALUATIONS, PLLC
900 Commerce Park, Suite 400, Millbrook, ST 61022
Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: IME-26-0187
Date of Service: 07/15/2026

INDEPENDENT MEDICAL EXAMINATION — ORTHOPEDIC

Examinee: Ramirez-Holt, Teodora L. DOB: 09/02/1978 Date of examination: 07/15/2026 Examiner: Gerald T. Pruett, MD (board-certified orthopedic surgery)
Requested by: counsel for the defendant (Marchetti's Market) Claim: premises liability, fall of 01/20/2026
Diagnoses: Right shoulder rotator cuff tear, status post repair (IME assessment)

RECORDS REVIEWED

Lakeview Primary Care 2021–2026 (including 03/15/2021 shoulder visit); Millbrook General Hospital ED 01/20/2026 and admission 04/09–04/10/2026; Pinecrest Orthopedics 01/28/2026–07/01/2026; Clearwater Imaging MRI 02/12/2026; Riverbend Physical Therapy 2019 and 2026; Millbrook Surgical Center 2019.

HISTORY (AS RELATED BY THE EXAMINEE)

The examinee reports she slipped on a wet floor at a grocery store on 01/20/2026, fell on her right hand and knee and struck her head. She denies any right shoulder symptoms in the year before the fall. She reports the 2021 episode as "a sore shoulder after the gym that went away in two weeks."

PHYSICAL EXAMINATION

A pleasant, age appropriate woman, moderately overweight, in no apparent distress. Normal gait and station, normal posture, normal strength, tone, sensation and deep tendon reflexes with the exception of 4+/5 strength in the supraspinatus musculature on the right. She has decreased motion in the right shoulder as follows. She has 160 degrees of flexion, 155 degrees of abduction, 35 degrees of extension, 25 degrees of adduction, 45 degrees of internal rotation and 90 degrees of external rotation. She has a positive impingement sign on the right.

DIAGNOSTIC STUDIES

The MRI of 02/12/2026 demonstrates a full-thickness supraspinatus tear with 1.2 cm retraction and a type II acromion with anterior spurring; the ED radiograph of the same shoulder shows subacromial spurring.

DISCUSSION AND OPINIONS

It is this examiner's opinion, to a reasonable degree of medical probability, that the examinee had pre-existing degenerative changes of the right shoulder (type II acromion, subacromial spurring, and a documented 2021 episode of right shoulder pain) and that the supraspinatus tear was more likely than not a degenerative tear that became symptomatic with the fall of 01/20/2026, rather than an acute traumatic tear. The fall aggravated a pre-existing condition. Apportionment: 50% pre-existing degeneration, 50% the fall. The surgery was reasonable. The examinee has reached maximum medical improvement as of this examination. No permanent restrictions are warranted; the 20-pound overhead restriction recommended by the treating surgeon is not supported by the examination today.

(Note: the treating orthopedist's records and the radiologist's MRI report characterize the tear as acute/subacute, citing the absence of fatty atrophy and the traumatic mechanism. The examiner disagrees for the reasons above.)

Electronically signed: Gerald T. Pruett, MD

Date of Service: 01/20/2026

EMERGENCY DEPARTMENT PROVIDER NOTE

Diagnoses: Right shoulder injury, suspected rotator cuff tear; Right knee contusion; Minor head injury without loss of consciousness

ICD-10: S46.011A, S80.01XA, S09.90XA, W01.0XXA, Y92.512

HISTORY OF PRESENT ILLNESS

47-year-old right-hand-dominant woman who slipped on a wet floor near the produce section of a grocery store at about 6:42 PM this evening. She fell forward onto her outstretched right hand and right knee and struck the occiput on a low shelf edge. No loss of consciousness, no amnesia, no vomiting. Immediate severe right shoulder pain with inability to actively abduct; right anterior knee pain; mild occipital headache. Denies neck pain, numbness, or weakness of the hand. No anticoagulants. Prior right shoulder issue: none reported today (see PCP records). Prior left knee arthroscopy 2019.

REVIEW OF SYSTEMS

Constitutional: no fever. Neuro: mild occipital headache, no vision change, no vomiting. Cardiopulmonary: negative. GI/GU: negative. Musculoskeletal: as per HPI. Skin: abrasion right knee.

PHYSICAL EXAMINATION

General: alert, uncomfortable, holding the right arm against the body. Vitals per triage. HEENT: occipital scalp contusion; pupils equal and reactive; no hemotympanum; no midline cervical tenderness. Chest/abdomen: nontender. Extremities: see focused examination.

MUSCULOSKELETAL (FOCUSED)

Right shoulder: diffuse tenderness over the greater tuberosity and anterior acromion; active abduction limited to 40 degrees by pain; passive ROM near full; positive drop-arm sign; weakness of external rotation 3/5; distal neurovascular intact. No deformity of the AC joint or clavicle. Right knee: abrasion and ecchymosis over the patella, mild effusion, full extension, flexion to 110 degrees, ligaments stable, no joint-line tenderness. Head: 2 cm occipital scalp contusion without laceration. Neck: nontender midline, full ROM. GCS 15.

ED COURSE

Radiographs of the right shoulder and right knee and a noncontrast CT of the head were obtained (reports attached). No fracture or dislocation; CT head negative. Ketorolac 30 mg IM at 20:14 with improvement to 5/10. Sling applied. Discussed likely rotator cuff injury given drop-arm and weakness; MRI to be arranged by orthopedics.

MEDICAL DECISION MAKING / DISPOSITION

Discharged home in stable condition at 23:48 with sling, ice, ibuprofen 600 mg q8h PRN and cyclobenzaprine 5 mg qHS PRN. Concussion precautions given; head-injury return precautions reviewed. Follow up with primary care in 3 days and orthopedics within 2 weeks. Work note: no use of the right arm x 1 week.

Electronically signed: Marcus T. Okonkwo-Bell, MD 01/20/2026 23:52

Date of Service: 01/20/2026

RADIOLOGY REPORT — RIGHT SHOULDER, 3 VIEWS

Diagnoses: No acute osseous abnormality of the right shoulder

CLINICAL: Fall onto outstretched hand; shoulder pain.

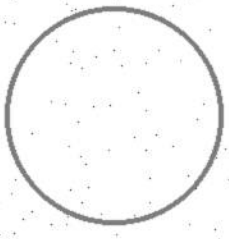

FINDINGS: AP, scapular Y and axillary views. No fracture or dislocation. Glenohumeral and acromioclavicular alignment maintained. Mild subacromial spurring. Soft tissues unremarkable.

IMPRESSION: No acute fracture or dislocation. Mild degenerative spurring of the acromion. If clinical concern for rotator cuff injury persists, MRI is recommended.

RADIOLOGY REPORT — RIGHT KNEE, 3 VIEWS
Diagnoses: No acute osseous abnormality of the right knee
CLINICAL: Fall; anterior knee pain.
FINDINGS: No fracture or dislocation. Small joint effusion. Joint spaces preserved. No lipohemarthrosis.
IMPRESSION: No fracture. Small effusion, likely traumatic.
Electronically signed: Priya N. Sundaram, MD

RADIOLOGY REPORT — CT HEAD WITHOUT CONTRAST
Diagnoses: No acute intracranial abnormality
REASON FOR EXAM: Fall with occipital head strike.
TECHNIQUE
Noncontrast axial CT images of the head were obtained.
FINDINGS
There is no acute intracranial hemorrhage, mass effect, midline shift, or extra-axial fluid collection. The ventricles and cortical sulci are normal in shape and configuration. The gray/white matter junctions are well preserved. There is no calvarial fracture. The visualized paranasal sinuses and mastoid air cells are clear.
IMPRESSION
Negative for acute intracranial disease.CT CERVICAL SPINE

DISCHARGE INSTRUCTIONS

Diagnosis: Right shoulder injury (possible rotator cuff tear); right knee contusion; minor head injury.
Wear the sling except for hygiene. Ice 20 minutes every 2–3 hours for 48 hours. Ibuprofen 600 mg every 8 hours with food as needed; cyclobenzaprine 5 mg at bedtime as needed (may cause drowsiness).
Head injury: someone should stay with you tonight. Return immediately for worsening headache, repeated vomiting, confusion, weakness, or unequal pupils.
Follow up: Lakeview Primary Care within 3 days; Pinecrest Orthopedics within 2 weeks (referral placed).
Work: no use of the right arm for 1 week.
Patient signature on file 23:44. Copy given.

Billed amount: $240.00 Allowed amount: $143.15 Plan paid: $114.52 Member responsibility: $28.63 Adjustment (contractual): $96.85
Remark codes: 45 (charge exceeds fee schedule), 1 (deductible) — see plan documents.

SECTION 11 — OTHER

Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: MGH-7720913
Incident date: 01/20/2026

CUSTOMER INCIDENT REPORT — MARCHETTI'S MARKET, STORE #14

Date/time of incident: 01/20/2026 6:42 PM Location: produce aisle, near the misting unit Reported by: shift lead (name redacted)

Description: Customer slipped on standing water near the produce misters and fell forward, striking a display shelf. Customer complained of right shoulder and right knee pain and a bump on the head. Customer declined store first aid and left with her husband to go to the hospital. Floor was wet; "Caution — Wet Floor" sign was NOT in place at the time of the fall (placed after). Video retained (cam 6). Witnesses: one customer (contact on file). Manager notified 7:05 PM.

MILLBROOK GENERAL HOSPITAL

1 Hospital Way, Millbrook, ST 61022 · [Phone]

Patient: Ramirez-Holt, Teodora L. DOB: 09/02/1978 MRN: MGH-7720913
Prepared: 09/01/2026

EMPLOYER STATEMENT OF WAGES AND ABSENCE

Employee: Ramirez-Holt, Teodora L. Position: Administrative Supervisor Employer: [Employer] Rate: $31.40/hr, 40 hrs/wk

Absences attributed to the injury: 01/21/2026–01/23/2026 (3 days); 04/09/2026–04/24/2026 (12 working days); intermittent PT appointments (2 hrs each, 36 visits).

Modified duty (no use of right arm / no overhead) 01/26/2026–08/12/2026 per physician notes on file. Lost wages (gross): $3,768.00 + PT appointment time $2,260.80 = $6,028.80.

PAIN DIARY (kept by the patient at counsel's request) — page 1 of 20

01/21/2026: Shoulder woke me up 3 times. Took ibuprofen.

01/23/2026: Block wore off around 2 am — worst pain so far.

01/25/2026: Couldn't hook my bra. Frustrated.

01/27/2026: Tired of this.

01/29/2026: Shoulder woke me up 3 times. Took ibuprofen.

PAIN DIARY (kept by the patient at counsel's request) — page 2 of 20

01/31/2026: PT today, sore after.
02/02/2026: Knee is fine now, shoulder still bad.
02/04/2026: Surgery scheduled. Nervous.
02/06/2026: Reached the top shelf for the first time!
02/08/2026: Block wore off around 2 am — worst pain so far.

PAIN DIARY (kept by the patient at counsel's request) — page 3 of 20

02/10/2026: Better day. Drove to work.
02/12/2026: Shoulder woke me up 3 times. Took ibuprofen.
02/14/2026: PT today, sore after.
02/16/2026: Tired of this.
02/18/2026: Better day. Drove to work.

PAIN DIARY (kept by the patient at counsel's request) — page 4 of 20

02/20/2026: Surgery scheduled, Nervous.

02/22/2026: Shoulder woke me up 3 times. Took ibuprofen.

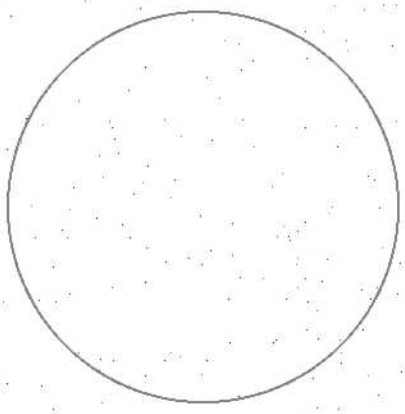

02/24/2026: Reached the top shelf for the first time!

02/26/2026: Tired of this.

02/28/2026: Better day. Drove to work.

PAIN DIARY (kept by the patient at counsel's request) — page 5 of 20

03/02/2026: Shoulder woke me up 3 times. Took ibuprofen.
03/04/2026: PT today, sore after.
03/06/2026: Reached the top shelf for the first time!
